

40G QSFP+ SR4 Transceiver

Hot Pluggable, MPO / MTP, 850nm VCSEL, OM3 100M / OM4 150M, DDM

Part Number: FQFP-I9-M85-X1D

Overview

FQFP-I9-M85-X1D is a Four-Channel Parallel Fibers QSFP+ transceiver for 40GbE and InfiniBand QDR, application especially in Data Center & Storage networks. The QSFP full-duplex optical module with MPO-12 receptacle offers 4 independent transmitter and receiver channels each capable of 10.3125Gbps operation for an aggregate data rate of 41.25Gbps up to MMF OM3 100m / OM4 150m optical links.

Applications

- 40Gb Ethernet
- OTN OTU3 @43.01G, OTU3e2 @44.58G
- Breakout to 4 x 10GBASE-SR Ethernet
- InfiniBand QDR interconnects
- Data Center & Storage
- Datacom / Telecom Switch & Router

Features

- Compliant with IEEE802.3ba 40GBASE-SR4
- Compliant with SFF-8436 QSFP+ MSA
- Support InfiniBand QDR
- 4 independent full-duplex channels
- Up to 11.2Gbps data rate per channel
- Hot Pluggable
- 850nm VCSEL array transmitter
- MPO-12 receptacle connector
- 2-wire interface for management and diagnostic monitor compliant with SFF-8436, SFF-8636
- Single 3.3V power supply
- Link distance 100m over MM OM3 fiber and 150m over MM OM4 fiber
- RoHS Compliant

Laser Safety

- This is a Class 1 Laser Product complies with 21 CFR 1040.10 and 1040.11 except for conformance with IEC 60825-1 Ed. 3., as described in Laser Notice No. 56, dated May 8, 2019.
- Caution: Use of control or adjustments or performance of procedure other than those specified herein may result in hazardous radiation exposure.

Note1: GND is the symbol for signal and supply (power) common for QSFP modules. All are common within the QSFP module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal common ground lane.

Note2: VccRx, Vcc1 and VccTx are the receiver and transmitter power suppliers and shall be applied concurrently. Vcc Rx, Vcc1 and Vcc Tx may be internally connected within the QSFP transceiver module in any combination. The connector pins are each rated for a maximum current of 500mA.

Digital Diagnostic Functions

As defined by the QSFP+ MSA, Ficer's QSFP+ transceivers provide digital diagnostic functions via a 2-wire serial interface, which allows real-time access to the following operating parameters:

- Transceiver temperature
- Laser bias current (4-Channel)
- Transmitted optical power (4-Channel)
- Received optical power (4-Channel)
- Transceiver supply voltage

It also provides a sophisticated system of alarm and warning flags, which may be used to alert end-users when particular operating parameters are outside of a factory-set normal range.

The operating and diagnostics information is monitored and reported by a Digital Diagnostics Controller (DDC) inside the transceiver, which is accessed through the 2-wire serial interface. When the serial protocol is activated, the serial clock signal (SCL pin) is generated by the host. The positive edge clocks data into the QSFP+ transceiver into those segments of its memory map that are not write-protected. The negative edge clocks data from the QSFP+ transceiver. The serial data signal (SDA pin) is bi-directional for serial data transfer. The host uses SDA in conjunction with SCL to mark the start and end of serial protocol activation. The memories are organized as a series of 8-bit data words that can be addressed individually or sequentially. The 2-wire serial interface provides sequential or random access to the 8 bit parameters, addressed from 000h to the maximum address of the memory.

For more detailed information including memory map definitions, please see the QSFP+ MSA Specification.
